

HCS OIL PROGRAM SAVINGS REPORT:

The **HCS Oil Program** is dedicated to monitor the condition of our client's machineries and equipment through a Filtration System combined with regular HCS Oil Analysis and Oil Diagnostics. Two of the many benefits of our Program are savings on oil consumption and savings on direct oil costs. On top of these two benefits, there is also a significant reduction on carbon emissions of the equipment participating the HCS Oil Program.

This report covers the duration of the Oil Program from 1st Jan 2015 to 29th February 2016. The equipment included are: Main Engines, Gearboxes, Generators, Bow Thrusters, Z-Pellers, Steering Gear and Crane.
